

Proper care in packing your case plays a significant role in the quality of the product and service we provide.

Broken and distorted pieces can result in ill-fitting prosthetics which means a new impression and an inconvenience to you and your patient.

Packing Your Case:

- Disinfect all case materials, label, and seal in a zip lock bag.
- Wrap models individually with bubble wrap and secure with rubber band or tape.
- Additional packing material is recommended inside the box to help protect the case.
 - Place loose crowns, bridges and or shade tabs in a separate small container or labeled bag/pouch.
- RX Form, any patient images/documents that accompany the case should be placed in a separate bag.

Shipping Your Case:

- Make note of Tracking #, place case(s) inside the box. We encourage multiple cases per box
 - Secure Box with tape or rubber band.
 - Pull tape off FedEx Pak and secure the closure.

Call NXT LVL Dental Lab at 877-800-2848 or email us at admin@nxtlvldentallab.com for more supplies or to schedule a pickup.
